# HARISH P

Chennai, India | +91 97898 73538 | info.harish.p@gmail.com | LinkedIn | GitHub | Portfolio

## PROFILE SUMMARY

Test Automation Engineer with 4 years of experience designing and delivering scalable automation solutions across Web UI, API, Mobile, Visual, Database, and Performance testing domains. Expert in Python-based frameworks (Selenium, PyTest, Robot Framework), CI/CD integration (Jenkins, GitHub Actions), and distributed performance testing (JMeter on AWS EC2). Proven ability to reduce regression cycle times, mentor junior engineers, and drive quality across Agile enterprise environments.

## CORE SKILLS

- **Languages & Frameworks:** Python, Selenium, Robot Framework, PyTest, Appium
- **Testing Domains:** Web UI, API, Mobile, Visual UX, Database (PostgreSQL), AI-driven Testing
- **Performance Testing:** Apache JMeter, Tricentis NeoLoad, InfluxDB, Grafana
- **CI/CD & DevOps:** Jenkins, GitHub Actions, Docker, AWS (S3, EC2)
- **Cloud & Cross-Browser:** BrowserStack
- **Tools & Platforms:** Postman, Python Requests, Applitools Eyes

## WORK EXPERIENCE

**Test Automation Engineer** | **Cognitive Mobile (KONE)** | Chennai, India *Apr 2025 – Present*

*Domain: Elevator CPU Systems | Industrial IoT Testing*

- Tested event-driven embedded system architecture and hardware signals
- Developed and maintained hardware-integrated automation test suites using Robot Framework with Python for elevator control systems across simulators and physical hardware devices.
- Executed daily and weekly automated regression pipelines via Jenkins, enabling continuous quality validation across release cycles.
- Designed and maintained Power BI dashboards to track QA KPIs, including test execution metrics, defect trends, and automation coverage
- Collaborated with developers, QA teams, and product owners in Agile sprints to ensure comprehensive test coverage alignment.

**Software Engineer – QA** | **Archimedis Digital** | Chennai, India *Apr 2022 – Mar 2025*

***Testing Centre of Excellence — Mobile & Performance Testing SME***

- Administered NeoLoad Cloud and integrated performance tests into CI/CD pipelines, enabling continuous performance benchmarking.
- Led mobile automation using Appium on BrowserStack, improving device compatibility coverage by 40% across iOS and Android.
- Conducted cross-browser and visual regression testing with BrowserStack and Percy across 20+ browser/OS environments.

***Enterprise Agile Tool — Portfolio Management Module***

- Architected a hybrid automation framework using Robot Framework, Selenium, and Python Requests — adopted across multiple enterprise projects.
- Proactively introduced Applitools Eyes for AI-driven visual testing, improving UI defect detection rate by 35%.
- Automated backend API testing with Python Requests, achieving 95% coverage of all critical API flows.
- Implemented secure test data handling with AES encryption/decryption for sensitive test inputs.

***Enterprise Agile Tool — Kanban Module***

- Refactored 206 legacy test cases into 50 optimised, modular tests — reducing execution time and maintenance effort by 70%.

- Extended functional coverage by building parallel API test cases alongside UI automation, reducing regression gaps.

***DevOps Trainee***

- Designed CI/CD pipelines using Jenkins and GitHub Actions for automated test triggering on code commits.
- Provisioned and configured automation environments using Docker containers, AWS EC2 instances, and Vagrant VMs.

## KEY ACHIEVEMENTS

- Reduced regression suite execution time by 70% through parallel test execution using pytest-xdist, Pabot, Docker, and Jenkins.
- Built reusable, framework-agnostic automation components adopted across 3+ enterprise projects.
- Designed and implemented distributed JMeter performance testing infrastructure using AWS EC2 worker nodes.
- Integrated JMeter metrics with InfluxDB and Grafana dashboards, enabling real-time performance monitoring and alerting.
- Mentored 15+ junior QA engineers in automation best practices, framework usage, and CI/CD workflows.

## PROJECTS

### Python Hybrid Automation Framework

Built a scalable, modular automation framework supporting parallel test execution, reusable page objects, encrypted test data, and CI/CD pipeline integration. Adopted as the standard framework across multiple enterprise client projects at Archimedis Digital. Stack: Python, Robot Framework, Selenium, PyTest, Jenkins, Docker.

### Distributed Performance Testing Framework

Designed and deployed a JMeter-based distributed load testing solution using AWS EC2 worker nodes to simulate high-concurrency scenarios. Integrated with InfluxDB and Grafana for real-time test metrics visualization and performance regression alerting. Stack: Apache JMeter, AWS EC2, InfluxDB, Grafana.

## EDUCATION

**Master of Computer Applications (MCA)** *Jun 2024 – Aug 2026 (In Progress)*
Madras University, Chennai, India

**Bachelor of Computer Applications (BCA)** *Jun 2018 – Aug 2021*
Prist University, Chennai, India

## CERTIFICATIONS

- Advanced Visual Testing Techniques — Applitools
